

Dear Senate Finance Committee,

Thank you for listening about how bad the 248a process is currently and holding all of these recent meetings regarding this problem. I am writing again to confirm that I believe it's not working as I detailed in my previous email to you.

I implore you to use your authority to address siting by establishing setbacks. Peer reviewed scientific literature that is not funded by the industry declares that 500 meters (1600feet) is a safe enough setback from homes, schools, workplaces, hospitals, etc. I am hoping the PUC denies the radio lattice tower project on Bordoville Rd in Enosburg as that would be 500 feet or so from my home in which I am raising two young children. Brooke Dingledeen mentioned my story in her testimony and I have written to you recently.

Thank you for listening to all of our concerns regarding the present and future stakes of the landscape on Vermont and the concerns of its citizens.

Pippa Dorfman
